Profile

Final-year BSc (Hons) Software Engineering student on track for a First, with 8 months of industry experience as a Software Engineer Intern at Co-op. Full-stack developer focused on React, Node.js and PostgreSQL, with apps deployed on AWS (Lambda, Amplify). Seeking a graduate software engineering role from summer 2027.

Education

Southampton Solent University **Jul 2024 – May 2027**
BSc (Hons) Software Engineering – On track for First-Class Honours *Southampton, UK*

- **Relevant modules:** Advanced Database Systems, Web Application Development, Data Structures, Algorithms & Mathematics, Object-Oriented Design & Development, Software Testing & Reliability Engineering, DevOps, Machine Learning, Mobile Application Development, Networks & Security
- Awarded a 20% academic excellence tuition scholarship

Experience

Co-op **Jan 2026 – Aug 2026**
Software Engineer Intern *Manchester, UK (Hybrid)*

- Worked in an agile engineering team on the pilot of Co-op's new colleague workforce app (Logile platform), used by store colleagues to view shifts, request holidays and time off, and track time and attendance
- Built the **message filtering feature**, so colleagues can filter alerts such as health screening and shift bids
- Contributed to full-stack features and RESTful APIs, and resolved production issues to improve performance
- Wrote clean, well-documented, maintainable code to team standards, and supported testing and releases
- Collaborated with product, design and QA in an agile team, taking part in sprint ceremonies and code reviews

Projects

ISC Audit – International Student Compliance | *React, Node.js, Express, PostgreSQL, Prisma* **2026**

- Building a startup SaaS platform that helps UK universities and employers keep international students within Student visa work-hour limits, with separate student, employer and admin dashboards
- Designed a **PostgreSQL** schema of 11 models with Prisma ORM, migrations and indexed queries, covering students, employers, term dates, shifts, violations and audit logs
- Built a REST API of 60+ endpoints in Express with JWT authentication, bcrypt, role-based access control, input validation, rate limiting, CORS and security headers
- Wrote a compliance engine that checks each shift against term dates and weekly limits (10/20 hours in term time), flags violations by severity, and keeps a multi-layer audit trail exportable as PDF audit packs

HalalNearMe | *React, Node.js, AWS Lambda, AWS Amplify, PostgreSQL* | Live | GitHub **2026**

- Full-stack app to find halal restaurants anywhere in the UK by live GPS or city search, using the Foursquare Places API and OpenStreetMap, with Haversine distance filters (1–25 miles)
- Deployed a serverless Express API on **AWS Lambda** and the React 19 frontend on **AWS Amplify** with CI/CD, backed by a Neon PostgreSQL database
- Implemented JWT sign-up/sign-in, protected routes and saved restaurants persisted in PostgreSQL

Jaura & Co – E-Commerce Website | *Node.js, Express, MySQL, Sequelize, Stripe* | GitHub **2025**

- Built a clothing e-commerce site with secure sessions, a persistent MySQL cart, AJAX search and **Stripe** payments
- Followed MVC architecture with Sequelize ORM, Helmet security, Winston logging and **Jest** unit tests; deployed on Render

Online Retail Store – Relational Database System | *SQL, SQLite, Python, Tkinter* **2025**

- Designed a 6-table relational database from business requirements, normalised to **3NF** with an ERD, keys, constraints and cascade rules
- Wrote triggers to keep stock in sync, reporting views and indexes verified with EXPLAIN QUERY PLAN, plus a SQL test suite
- Built a Tkinter CRUD app using parameterised queries to prevent SQL injection

Technical Skills

Languages: JavaScript (ES6+), SQL, Python, HTML5, CSS3
Frontend: React, Vite, React Router, Context API, Axios, EJS, AJAX
Backend: Node.js, Express, REST APIs, JWT, bcrypt, Prisma, Sequelize, Mongoose, WebSockets/Socket.IO, Stripe
Databases: PostgreSQL, MySQL, MongoDB, SQLite
Cloud & DevOps: AWS (Lambda, Amplify), Neon, Render, Git, GitHub, CI/CD
Testing & Tools: Jest, Postman, Winston, ESLint, npm
Practices: MVC, RESTful API design, serverless architecture, database normalisation, Agile, code review
